

A comparative analysis of dried manjo slices as a snack aid

Brian Kroth

February 25, 2022

Abstract

Snacks are critical components to any creative process. They provide necessary nutrients to power brain processes, as well as enjoyment for the individual. Yet, many snack consumers lack the time for careful consideration of this important aspect to their activities. In this study, we compare two types of dried fruit along several dimensions to provide such inattentive creatures additional priors to help inform their snack selection.

1 Introduction

2 Background

3 Evaluation

For this particular study we focus in on two different varieties of dried mango slices that we were donated by the study's patron:

- Just Mango

As the description says, this item is purely dried mango. As such, it is somewhat chewy and can get stuck in one's teeth. Moreover, we suspect that some amount of the sugars have left the item in the dehydration process, though the nutritional facts seem to

claim otherwise.

- Soft and Juicy Mango

This item includes additional sugars and preservatives to help maintain moisture in the item and counteract some of the chewy properties of the alternative. However, there are also fewer dietary fibers in this item, and thus may prove less effective as a viable snack over time. See Section 4 for additional comments.

Table 1 summarizes our results.

4 Future Work

Due to lack of time, our current study only incorporates a few brief sample tests. For better results, a longitudinal study incorporating additional aspects such as blood sugar measurements, time of day, auxiliary diet, environmental conditions including temperature and humidity, and phase of the moon are suggested. We postpone such efforts until further funding and motivation can be obtained.

5 Conclusion

As we have seen, careful consideration to the selection of snacks is an important aspect of the

Type	Taste	Texture	Overall
Just Mango	Hint of sweetness	Dry/Chewy	Good
Soft and Juicy Mango	Much more sweet	Moist/Chewy	Very good

Table 1: Evaluation Results

creative process and enjoyment of said snacks. We would like to thank our patron, Tanis Steed, for providing the test materials, and so dedicate this publication in their honor. We would also like to thank Chai T. Beverage and Real Paper Procrastination Syndrome for their additional help in writing.
